NOVACARE HEALTH AND SAFETY POLICY

Document status: Hypothetical internal company document. This document is designed for NovaCare's home-maintenance service model and should be reviewed against applicable Sri Lankan employment, privacy, occupational safety and other legal requirements before operational use.

Purpose

NovaCare is committed to protecting employees, customers and other persons who may be affected by its home maintenance operations. Safety is a core requirement of service delivery and must not be sacrificed for speed or convenience.

Responsibilities

Management is responsible for providing appropriate safety arrangements, information and resources. Supervisors are responsible for monitoring compliance and responding to reported hazards. Employees are responsible for following safety instructions, using required equipment and reporting hazards.

Customer-Site Risk

Before starting work, field staff should consider the condition of the work area, access routes, electrical supply, water sources, working height, tools, chemicals, pets, occupants and other foreseeable hazards. Where a task cannot be performed safely, the employee must stop and escalate the matter.

Personal Protective Equipment

Employees must use the personal protective equipment specified for the task and maintain it in usable condition. Damaged or unsuitable equipment should be reported and replaced through the approved process.

Tools and Equipment

Employees must use tools and equipment only for their intended purposes and should carry out reasonable pre-use checks. Defective equipment must not be used where it creates a safety risk.

Electrical and Technical Work

Electrical, plumbing, gas, structural or other specialist work must be undertaken only by appropriately competent or authorized personnel and within the approved scope of service.

Working at Height and Manual Handling

Employees must use suitable controls for work at height and avoid unsafe improvised access methods. Manual handling should be planned to reduce injury risk, including seeking assistance for heavy or awkward loads.

Incidents

Accidents, injuries, near misses, property damage and significant hazards must be reported promptly. Records should identify the circumstances and corrective actions without concealing relevant facts.

Emergency Situations

Employees should prioritize immediate safety, contact emergency services where necessary and notify NovaCare management as soon as reasonably practicable. Employees should not undertake actions beyond their competence during an emergency.

Training

Employees must receive relevant safety induction and task-specific instruction. Refresher training should be provided where risks, equipment, incidents or procedures indicate a need.
